DETAILED ACTION

1. The claims as currently amended require the following restriction requirement.

Election/Restrictions

2. This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1: an integrated circuit (or memory cell) comprising a reflective (or capacitor) layer, a first antireflective layer over the reflective layer, a second antireflective layer over the first antireflective layer, a dielectric (or insulating) layer over the second antireflective layer and a metal layer over the dielectric layer. Species 1 reads on independent claims 32, 40 and 50. (Claims 36, 38 and 39 depend on claim 32 and claims 42, 44-48 depend on claim 40).

Species II: a computer system including a memory cell comprising a capacitor layer, a first dielectric layer over the capacitor, a first antireflective layer over the first dielectric, a second antireflective layer over the first antireflective, a second dielectric layer over the second antireflective layer and a metal layer over the second dielectric layer. Species II reads on independent claim 51.

Species III: an integrated circuit comprising a reflective layer, a first silicon dioxide layer over the reflective layer, a first antireflective layer over the first silicon dioxide layer, a second antireflective layer over the first antireflective, and a second silicon dioxide layer over the second antireflective layer, wherein the first and second indices of refraction are different. Species III reads on claim 60.

Art Unit: 1756

Species IV: an integrated circuit comprising a reflective layer, a dielectric layer over the reflective layer, a first antireflective layer over the dielectric, a second antireflective layer over the first antireflective, and a metal layer over the second antireflective layer. Species IV reads on independent claims 61 and 63.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 1756

the prior art, the evidence or admission may be used in a rejection under 35

U.S.C. 103(a) of the other invention.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nicole M. Barreca whose telephone number is 571-272-1379. The examiner can normally be reached on Monday-Thursday (9AM-7PM).
